

## MySQL installation instructions for MeOS

*Version 2018-08-06*

Download MySQL Community Server version 8.0. You will be asked to create an account, but you may skip this step, just click “No thanks”. Choose the web installer.

Select to install Server only, standalone MySQL server.

**Important:** Select Legacy Authentication Method in the setup.

Enter a root account password, and add a user (user name and password) for use with MeOS. The default settings will work.

MySQL configures the firewall rules automatically. Remember to configure the network as *private* (home/office) in Windows otherwise it will not work with other computers.
